

## Air pump saves the dollars

AIRWELL Pumps Geraldton agent Des Garvin (left), and company salesman Tom Sedgwick explain the direct air injection pumping system to Yuna farmer Greg Creasy at last week's Mingenew Lions Midwest Expo.

According to Des, he has clients who are pumping more

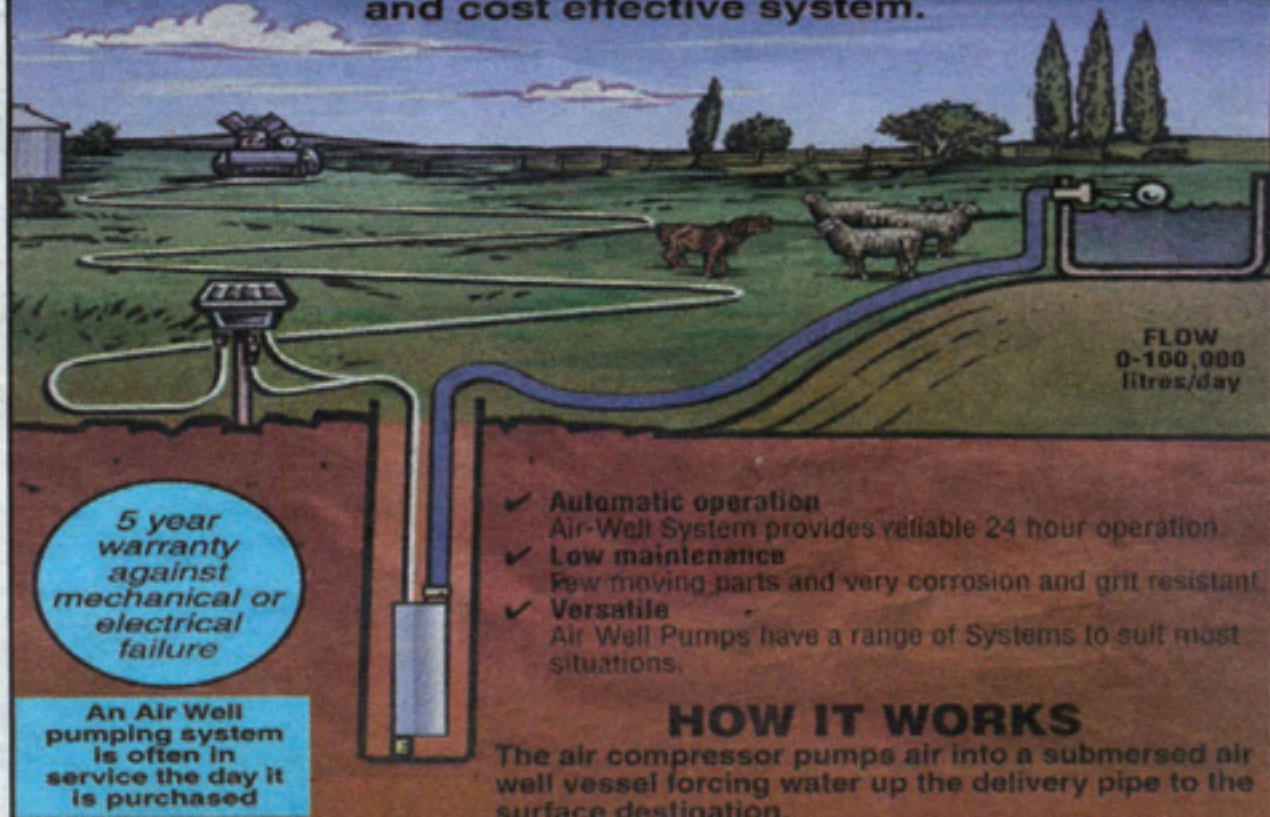

than 30 million litres of water each year with a single Airwell pump, at a cost of 8.3c/1000L.

"Some of our older systems have pumped in excess of 400 million litres over 17 years and are still going strong," he said.

"We have gone from last resort to being first choice for many rural clients."

## Maximise your bore water resource at less capital expense

The Air Well Pumping System represents an innovative concept in water pumping, using compressed air in a simple and cost effective system.

5 year warranty against mechanical or electrical failure

An Air Well pumping system is often in service the day it is purchased

- ✓ Automatic operation  
Air-Well System provides reliable 24 hour operation.
- ✓ Low maintenance  
Few moving parts and very corrosion and grit resistant
- ✓ Versatile  
Air Well Pumps have a range of Systems to suit most situations.

### HOW IT WORKS

The air compressor pumps air into a submersed air well vessel forcing water up the delivery pipe to the surface destination.
